Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 17, Application US/09777921A
Fatent No. US202011513641
GENERAL INFORMATION:
FATENT NO. US202011513641
FATENT NO. US2020201513641
FITLE OF INVENTION: ISOLATED HUMAN TRANSPORTER PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING HUMAN TRANSPORTER PROTEINS,
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: CLOO1103
CURRENT APPLICATION UNMERS: US/09/777,921A
CURRENT FILING DATE: 2002-02-07
NUMBER OF SEQ ID NOS: 126
SEQ ID NO 17
LENGTHARE: FREESEQ for Windows Version 4.0
SEQ ID NO 17
LENGTH: 6
TYPE: PRT
TYPE: PRT
CRAMISM: Homo sapiens

Publication No. US20030229199A1

GENERAL INFORMATION

APPLICAMY: Blaschuk, Orest W.

APPLICAMY: Symonds, James Matthew

APPLICAMY: Symonds, James Matthew

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR WODULATING NONCLASSICAL

TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS

FILLS REFERENCE: 100086.407C9

CURRENT APPLICATION NUMBER: US/10/395,032

CURRENT FILING DATE: 2003-03-21

NUMBER OF SEQ ID NOS: 4052

SOFTWARE: PATENTIN Ver. 2.0

SEQ ID NO 637

ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Representative linear modulating agent based on
OTHER INFORMATION: cadherin-related neuronal receptor cell adhesion
CHER INFORMATION: recognition sequence

c amino acid residues of the first segment, together with an additional amino acid residues of the first segment, together with an additional between a mino acid residue(s) adjacent to the first amino acid sequence. The between and disuphide bridges of a polypeptide are determined by identifying a superstructure encompassing alternative beta-strand arrangements, representing the superstructure by an integer-linear of programming mathematical model, with the model maximising the total hydrophobic contact energy, and then solving the model. The method can also apply energy modelling with a full atom force field potential to generate a constrained global optimisation problem, optionally applying a corsination problem to determine the three-dimensional structure of polypeptide and is accurate and reliable. The sequences presented in ABU12184-ABU12235 are the pentapeptides of the Streptomyces griseus immungolobulin-binding domain from streptococcal protein G, 1081, which were used to predict the alpha-helical regions in an example of the method of the invention

New multimer of single-chain antibodies, useful e.g. for diagnosis drug delivery, has four variable chains linked through peptides of controlled length.

Example 1; Fig 2B; 16pp; German.

This invention describes a novel multimer containing at least two attibodies, each, independently, comprising a polypeptide chain of structure V1-PA-V2-PW-V3-PB-V4 where V1-V4 = variable domains; PA, PB and PM = peptide linkers with PA and PB containing 0 or 1 amino acid. The

The invention discloses a ASTRO-FOLD approach for the ab anitio prediction method for determining the existence and location of alphabeliax regions and arrangement of beta-sheets and disulphide bridges of a polypeptide. The method comprises defining the first segment of the amino acid sequence, performing atomistic modelling upon each segment of senerating an ensemble of low energy conformations, determining the entropic and free energy for each segment and then ascertaining the equilibrium probabilities for helical clusters. The segments consist of pentapeptides, with each further segment including a majority of the

products of the invention have cytostatic activity. The multimers described can be used for diagnostic detection, in essentially standard immunoasay methods, and for binding at least one component and/or fused protein or peptide to a cell, especially to deliver a toxin or for infection, transformation or transfection of the cell. (I), or nucleic acid (II) encoding it, or vectors containing (II), are useful for treating tumours. The multimers are relatively small (about 110 Kpa formers) but have multiple binding sites to ensure high binding affinity. This sequence represents a fragment of the single chain diabody CBAGal (composed of a tumour marker carcinoembryonic antigen fragment and E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Streptococcal protein G, 1GB1, alpha helix prediction pentapeptide #51.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ASTRO-FOLD; ab anitio; alpha-helix; beta-sheet; disulphide bridge; atomistic modelling; low energy conformation; entropic energy; free energy; equilibrium probability; helical cluster; integer-linear; mathematical model; hydrophobic contact energy; actom force field potential; global optimisation; toreion angle; dynamic algorithm; three-dimensional structure; tertiary structure; immunoglobulin-binding domain; protein G; 1681.

ABRS5412-20 represent conserved region of a phospholipase C (PLC)-zeta polypeptide. PLC-zeta polypeptides are capable of triggering calcium oscillations in occytes. The PLC-zeta isoform is expressed specifically in mammalian sperm, and is an addispection for mammalian fertilisation and embryo development. PLC-zeta polymucleotides are useful for preparing a composition for diagnosing or treating infertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  An isolated antibody has been developed which binds specifically to cytotoxic lymphocyte maturation factor (CLMF) and neutralises CLMF induced proliferation by more than 50% in a CLMF dependent T cell growth assay and/or inhibits binding of at least 60% of the factor to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytotoxic lymphocyte maturation factor; CLMF; cytokine; synergize; interleukin 2; IL-2; human; lymphoblastoid cell; detection; purifying; proliferation; cytotoxic T cell; transplantation; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibodies to cytotoxic lymphocyte maturation factor - useful for detecting, purifying, and/or blocking proliferation and activation of cytotoxic T cells, such as in transplantation(s).
                                                                                                                                               New phospholipase C-zeta gene, useful for preparing a composition for diagnosing or treating infertility.

phytohaemagglutinin (PHA) activated peripheral blood lymphocyte (PBL) blasts as determined in a CLMF receptor binding assay. CLMF is a heterodimeric protein having a molecular weight band of 75 kD, determined by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) under non-reducing and/or reducing conditions, providing a first subunit having a molecular weight band of 40 kD and a second subunit having a molecular weight band of 40 kD and a second subunit having a molecular weight of 35 kD. The present sequence represents a tryptic 40 kD cLMF peptide off polyvingleen difluoride (PVDF), from an example of the present invention. The antibody can be used for the purification and/or detection of CLMF. It is also used in therapeutic treatments which require selective blocking of proliferation and activation of cytocoxic T cells (CTLs) such as in transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; bleadherin; cadherin-5; cadherin-7; cadherin-13; cadherin-13; cadherin-15; T-cadherin; pB-cadherin; protocadherin-12; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmocallin; cancolum binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g.
                                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to diagnosing the presence of colon cancer, metastases of colon cancer, staging colon cancer, monitoring colon cancer for the onset of metastasis or monitoring a change in stage of colon cancer in a patient. The method involves determining a colon specific gene (CSG) in cells, tissues or bodily fluids and comparing it with levels of CSG in cells, tissues or bodily fluids from a normal human control. Colon cancer can be treated by administering a molecule which down regulates the expression or activity of CSG. An immune response against a target cell expressing CSG can be induced by delivering an immune response is mounted. Therapeutic agents are useful for imaging colon cancer in a patient by administering an agent labelled with paramagnetic ions or a radioisotope to the patient. They are also useful for paramagnetic ions or a radioisotope to the patient. They are also useful for the disease. Sequences ANUSESCA PANUSSCO represent human colon specific protein antibody binding sites used in the method of the

The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40677) which forms part of a scaffold protein. S4 is a bet strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at the teast 6 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands
                                                                                                                                                                                                                        Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New scaffold protein, useful for stabilizing antigens used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S4 derivative #9, beta strand of scaffold protein structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 24; DB 3; Length 7;

form two beta sheets $1/$4/$3 and $6/$5/$2 with each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands Al-A3 are included in the structure the caffold is constructed of two beta sheets, with the structures the caffold is constructed of two beta sheets, with the structures of Al/$1/$4/$3 and $6/$5/$2/$2/$A2/$3. The beta strands are connected to each other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules for example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will carried the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target the complex to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; CTLA-4; scaffold protein; antigen-binding; receptor-binding; SCA domain; cancer; thrombosis; osteoporosis, rheumatoid arthritis; diabetic retinopathy; atherosclerosis.

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY4067) which forms part of a scaffold protein. S4 is a beta estrand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least beta-strands. The scaffold protein his constructed of beta crands all s6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of functionally equivalent derivative of these sequences. The beta strands of the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures of the next by hydrogen bonds, which pease trands are connected to the rate of incomplex of two beta sheets, with the structures of two ther via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to the complex to tumour cells. Protein may be used to carget the complex to tumour cells. Another surface may be bound to a protein such as receptors, or their may also be used to tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                   New scaffold protein, useful for stabilizing antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding; SCA domain; cancer; thromboais; osteoporosis, rheumatoid arthritis; diabetic retinopathy; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            75.0%; Score 24; DB 2; Length 7; 83.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine; tumour; chemotherapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumarcid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will target the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, CTLA-4; scaffold protein, antigen-binding; receptor-binding; SCA domain; cancer; thrombosis; osteoporosis, rheumatoid arthritis; diabetic retinopathy; atherosclerosis.

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta servand peptide which forms part of a beta sheer. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 6 beta-strands. The scaffold protein which contains at least 6 beta-strands. The scaffold protein is constructed of beta strands. The scaffold protein is constructed of beta strands also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of forms two beta sheets $1/84/83 and $6/85/$2 vith each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures of the next by hydrogen bonds, which be beta strands are connected to other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface may be bound to a protein which binds to a tumour antigen. The scaffold protein may be used to target tumour cells. Therefore the scaffold protein may be used to target tumour cells. Therefore the scaffold protein may be used to target tumour cells. Therefore the scaffold protein may be used to stabilize individual peptides in a peptide library and may be used in stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New scaffold protein, useful for stabilizing antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-V40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of converted to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure of the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure of scaffold is constructed of two beta sheets, with the structure of the roll of the amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens Disclosure; Page 6; 105pp; English.

Gene 67:203-211(1988).
-!- CATALYTIC ACTIVITY: Dethiobiotin + sulfur = biotin.
-!- PATHWAY: Biotin blosynthesis; last step.
-!- SIMILMARITY: Belongs to the biotin and lipoic acid synthetases family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PSK_DAUCA STANDARD; PRT; 5 AA.

-!- SUBCELLULAR LOCATION: Secreted.
-!- FUM: SULfation is important for activity and for the binding to
    putative membrane receptor (By similarity).
-!- SIMILARITY: Belongs to the phytosulfokine family.
Growth factor; Sulfation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN=CV. Sanchez J.-C., Rouge V., Frutiger S., Hughes G., Yan J.X.,
Hoogland C., Appel R.D., Binz P.-A., Hochstrasser D.F.,
Cowfrorne M.;
Submitted (AUG-1998) to Swiss-Prot.
-!- FUNCTION: Mediates tetrahydrobiopterin inhibition of GTP
cyclohydrolase I. This inhibition is reversed by L-phenylalanine
-!- SUBMIT: Homodimer (By similarity).
-!- SUBMIT: Homodimer (By similarity).
-!- SUBMIT: MT MT MT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                A37114

hypoxanthine phosphoribosyltransferase (EC 2.4.2.8) - fluke (Schistosoma mansoni) (fragm hypoxanthine phosphoribosyltransferase (EC 2.4.2.8) - fluke (Schistosoma mansoni) (fragm C; Species: Schistosoma mansoni)
C; Species: Sa-Mar-1991 #sequence_revision 28-Mar-1991 #text_change 23-Jun-1993
C; Accession: A37114 #sequence_revision 0.H.; Wang, C.C.
J. Biol. Chem. 265, 13528-13332, 1990
A; Title: The hypoxanthine-guanine phosphoribosyltransferase of Schistosoma mansoni. Furt A; Reference number: A37114; MUID:90337955; PMID:2199439
A; Accession: A37114
A; Status: preliminary
A; Molecule type: protein
A; Residues: 1-5 < YUA.
C; Keywords: glycosyltransferase; pentosyltransferase

34.5K structural protein - Leuconostoc oenos phage P32 (Stragment)
C,Species: Leuconostoc oenos Phage P32
C,Date: 31-Mar-1993 #sequence_revision 22-May-1998 #text_change 22-May-1998
C;Accession: H44817
R;Arendt, BK.; Lonvaud, A.; Hammes, W.P.
J. Gen. Microbiol. 137, 2135-2139, 1991
A;Title: Lysogeny in Leuconostoc oenos.
A,Reference number: A44817; MUID:92085033; PMID:1748868
A;Accession: H44817
A;Molecule type: protein
A;Residues: 1-5 care.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            34.5K structural protein - Leuconostoc oenos phage P54 (fragment)

Sequence 24, Application PC/TUS9107506

GENERAL INFORMATION:
APPLICANT: Belstein, David
APPLICANT: Belstein, Timothy
TITLE OF INVENTION: Methods for modifying DNA and for
TITLE OF INVENTION: encoded modified polypeptides with target substrates.
TITLE OF INVENTION: encoded modified polypeptides with target substrates.
NUMBER OF SEQUENCES: 86
CORRESPONDENCE ADDRESS:
ADDRESSEE: Richard F. Trecartin
STREET: 4 Embarcadero Center, Suite 3400
CITY: San Francisco
STRATE: California
COUNTY: USA
